The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-11, 13-17, 19-23, are rejected under 35 U.S.C. 103(a) as being unpatentable over Horiguchi IEDM.

The previous rejection still applies. The new limitation "having sub lithographic dimension" does not structurally distinguish over the prior art because the prior art floating gate dimension is 0.1um which is sub optical lithographic dimensions. The Horiguchi device was made by electron beam processing which enables sub optical lithographic dimensions. The product by process limitations do not structurally distinguish over the applied art. See the previously recited caselaw. Note again that it is the final product which determines patentability in a product by process claim, not the process.

Claims 1-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Horiguchi in view of Watanabe or Hong.

The previous rejection with the above comments applies.

Applicant's arguments filed 2/28/02 have been fully considered but they are not persuasive. As stated above and contrary to applicant's, Horiguchi does not use standard optical lithographic dimensions, he uses electron beam lithography to produce sub optical lithographic dimensions. Again note that "sub lithographic" is broad and undistinguishing over the applied art.
